

15-25 LIVE ATTENDEES

Safe, Socially Distanced OSHA Training

Power Construction is one of Chicago's most respected and prolific builders of small and large commercial and university science lab and prototype production facilities. They were looking for a safe venue to host their OSHA 30 Construction Course, bringing staff together from around Chicago area.

Since OSHA still requires in-person training to remain compliant, the COVID-19 pandemic presented a major challenge. Power Construction had to pivot its successful full day large training approach to smaller group training with multiple day attendance. They turned to the OLC where they have held other events for the last two years.

Working with the OLC, Power Construction designed their training to include 15-25 people per day, learning construction safety in line with OSHA requirements. The smaller groups were spread out in OLC's spacious auditorium, following all socially distanced protocols and facemask requirements. Staggered arrival times were assigned, which included attendance checks and a new, separate OLC entrance.
